

PONNY KIDS AND THEIR PROJECTS

November 2103

Ecology – Waste sorting

This eco lesson was quite exciting again because this time we went out to try to sort the waste in real. And it was a nice walk as well.

Tigers are ready to sort...

It was a nice walk as well...

We found the containers...

They squeezed the bottles...

And placed them into container... They sorted the paper as well...

Some plastic bottles and paper were given to Tigers and some glass bottle as well. Before swimming we went for walk to the basic school at Nám.Míru. There are some containers for sorting the waste. We went there and placed the glass bottle to the right container together and we did the same with the plastic bottles.

During this we were talking about the waste sorting, why should we do this and what is going to happen with the bottles. Tigers are going to understand what is going on with this topic.
