

PONNY KIDS AND THEIR PROJECTS

September 2013

Ecology – Tracing the animals in ZOO

This time Tigers visited ZOO as a part of our ECO project. They took part in education program called Tracing the animals.

Tigers were allowed to cradle a ferret...

They learned something about antlers...

Then they went for tour around zoo...

And watched the animals...

Today morning Tigers spent at ZOO. At the very beginning they were allowed to cradle the speaker's ferret – that was really nice experience for some of them. After this the speaker went through the slide show that showed footprints, sounds and way of life of some czech animals. There was a presentation of animal skulls and antlers as well. Finally the speaker guided the children around a part of the ZOO so they saw the most interesting animals.

Children were really excited and talked about going there again for hours and days. It was amazing trip for them.
